

## Helpful Paver Maintenance Tips

- If you have a landscape service, please schedule landscapers so they do not come on the day of sealing. It is advisable to reschedule to have them come at least two days after the sealing to allow for curing time. Landscapers should be instructed not to make tight turns on sealed pavers in order to prevent tire markings from their riding equipment.
- It is the homeowner's responsibility to remove furniture, plants, and any other movable decorative items from any area prior to being cleaned and sealed.
- Replace furniture, plants, and any other decorative items on the paver surface the next day.
- Pool maintenance service should not be done on the day of sealing. Regular pool maintenance can be performed the day following the sealing to remove any sand and debris from the pool and filters.
- Turn off your irrigation system the day before your pavers are to be cleaned and sealed.
- Make sure all automobiles or recreational vehicles that will need to be used are out of the garage and not on the paved area that are to be cleaned and sealed. If the garage door closes on the pavers and you are not home the day of cleaning and sealing, please make arrangements to ensure the garage door is partially left open.
- The paver surface can be opened to light foot traffic 4-5 hours after cleaning and sealing is completed. We recommend giving 24 hours for any heavy traffic.
- Please keep pets indoors while paver surfaces are being cleaned and sealed. Paved surface can be open to pet traffic 4 hours after sealing is completed.
- The paver surface can be opened to vehicular traffic 48 hours after cleaning and sealing is complete. Do not make any tight turns or sudden stops, to prevent tire markings.
- If the cleaned and sealed paver area is around a pool, you may use the pool after 24 hours of completed service.
- There may be a slight odor after the sealing. This odor is rarely noticeable and will usually dissipate within a week.
- We recommend sealing maintenance every 3 to 5 years.
